Variable costs per unit:	
Direct materials	$ 10
Direct labor	$ 10
Variable manufacturing overhead	$ 4
Variable selling and administrative expenses	$ 4
Fixed costs per year:	
Fixed manufacturing overhead	$ 93,750
Fixed selling and administrative expenses	$ 285,000

During the last year, 31,250 units were produced and 26,000 units were sold. The Finished Goods inventory account at the end of the year shows a balance of $126,000 for the 5,250 unsold units.

Required:

1. Determine whether the company is using absorption costing or variable costing to cost units in the Finished Goods inventory account.

a. Calculate the ending balance in the Finished Goods inventory account under variable costing and absorption costing.

	Ending Balance in Finished Goods	
Variable costing	$	126,000
Absorption costing	$	141,750

b. Which costing method is the company using to cost units in the Finished Goods inventory account?

Variable costing

2. Assume that the company wishes to prepare financial statements for the year to issue to its stockholders.

a. Is the $126,000 figure for Finished Goods inventory the correct amount to use on these statements for external reporting purposes?

No, because variable costing is not generally accepted for external reporting.

b. At what dollar amount *should* the 5,250 units be carried in the inventory for external reporting purposes?

Finished goods inventory balance for external reporting purposes	$	141,750

Explanation:

1.
The company is using variable costing. The computations are:

	Variable Costing	Absorption Costing
Direct materials	$ 10	$ 10
Direct labor	10	10
Variable manufacturing overhead	4	4
Fixed manufacturing overhead ($93,750 ÷ 31,250 units)		3
Unit product cost	$ 24	$ 27
Total cost, 5,250 units	$126,000	$141,750

Hi Kay and List.
Although I am new to the Internet and this List, I have gained much information from your earlier E-mails, thank you to all contributors.
My name is Arthur William Besanko and I live in Colonel Light Gardens, a southern suburb of Adelaide, South Australia. My ancestoral line goes back as follows;

Parents, William Harold/Edith Rebecca MILLINGTON
Benjamin William/Betsy Julia ZEUNER
William/Jane DATE nee McLEOD
Benjamin/Anne WILLIAMS

I have found from the news-paper, "THE SOUTH AUSTRALIAN REGISTER, Wednesday 18th October 1848," in the shipping section,"Arrived, Sunday 15th, the Barque SANTIPORE, 515 tons, from London, having left Plymouth 17th June."
Among the passengers listed;

Benjamin BASSANKE, wife and five children (a daughter born to them at sea, Aug 23).

Of the five children, I have only located three names,

1. Benjamin b.27 Oct 1834, Lanner, Cornwall.
2. William b.11 Sep 1838, Lanarth Moor, Cornwall.
3. ------?
4. Elizabeth Grace Williams b.16 Feb 1846, Cornwall.
5. -----Female b.23 Aug 1848. at sea.

Does any one have information on the 'missing' persons?
Who else is following this line? Don't let me think I'm the only one.
Arthur.

Difficulty: 1 Easy	Learning Objective: 06-05 Compute companywide and segment break-even points for a company with traceable fixed costs.

2. By how much would the company's net operating income increase if Minneapolis increased its sales by $112,500 per year? Assume no change in cost behavior patterns.

Net operating income increase	$	45,000

Explanation:

2.
$112,500 × 40% CM ratio = $45,000 increased contribution margin in Minneapolis. Because the fixed costs in the office and in the company as a whole will not change, the entire $45,000 would result in increased net operating income for the company.

It is not correct to multiply the $112,500 increase in sales by Minneapolis' 25% segment margin ratio. This approach assumes that the segment's traceable fixed expenses increase in proportion to sales, but if they did, they would not be fixed.

Table 10—***Guidelines for Conducting Sleep Restriction Therapy****

Reduce time in bed to the amount of actual total sleep time as shown by sleep logs, but not <4.5 h.

The arising time is fixed, and the bedtime is manipulated based on the patient's self-reported sleep efficiency. If the sleep efficiency for the prior 5 days is > 90%, then the patient goes to bed 15 min earlier.

If sleep efficiency is < 85%, then the bedtime is pushed back later to equal the mean total sleep time of the prior 5 days. A decrease in time in bed is not made for at least 10 d from the beginning of treatment, or within 10 d of any other schedule change.
